Hello, MiFans! With this publication, Mi Community brings you the information and download of the APK of the MIUI system launcher in its latest version. Remember that this is an ALPHA version, that is, very advanced, but in development! There may be some bugs, although those of us who use it have found nothing remarkable in terms of problems, but this will depend a lot on any version of MIUI. Also remember that Poco branded phones have their own system launcher, which is not compatible with MIUI, which is shared in this thread. Another fact to note is that it does not seem to work with MIUI 11, at least in the versions in which we have tried to test it. It apparently works with MIUI, but with Android 10.What is the system launcher? It takes care of the organization of everything we see on our screens as long as our MiPhone USES MIUI as an interface, that is, all but the MiPhones of the " A&quot; Series; Whose Interface is Android One, more or less stock version of Android.How do you install it? The installation is similar to any other APK you have previously installed. We go to the download link that we attach at the end of the thread, download it and at the end of the download by clicking on the APK, we need to grant the browser the permissions to install from unknown sources. The alert that appears on the screen already allows us to access the submenu without having to search. The most important novelty it brings is visual. In this latest ALPHA version you can rearrange the multitasking or the latest of the classic way in Xiaomi for a few versions of MIUI, that is, vertically or horizontally Android type in its latest versions. This is the most important novelty, but further, although we have commented that it may be mistakes to be an ALPHA, it is no less successful to verify that for many users who have just received MIUI 12, it will also be an APK that can greatly polish the possible delays, bugs of any kind etc. that our MiPhones have with the first or second version of MIUI 12. To change the way we see the windows in the last or multitasking, we need to access the settings of the phone, the home screen and scroll down the screen to find &amp;quot;arrange elements in recent years&amp;quot;. You can also access this menu by pinching the home screen with two fingers and clicking and then click on more. Can you uninstall it? Yes, there are several ways to replace the ALPHA version that our MIUI 12.1 version brought with it. From Settings:Let's go to phone settings, apps, installed apps, system launchers (or launcher launchers Click on the app, scroll down to the options and we should uninstall &quot;updates&quot; To find. With this simple method, we need to go back to the version we used to have. After uninstalling, a manual restart is recommended.2. From System Updater:Access of phone settings, phone information, system updater, three dots right, &quot;Download latest update&amp;quot;, we do, and then we give you to update or install. We waited for the whole process and in the end we have to have the update as we had before installing this APK. Note: In both processes of switching between system launchers, a manual restart by the user is recommended. Where do we download it?:There are groups on Telegram that have already shared the APK for a few days, but from here we will let you download the download link to the Mirror APK website, which is very secure. If you click on the link below, we will access the version for download, look at the nomenclature, as several launchers are available. My Alpha Launcher latest versionWhen the option is changed and so remains the &amp;amp;last&amp;quot; Receive an advertisement. We hope you find it very useful and interesting. We read, Community.-TYR-Author's Note: Thanks to user MarcosPorto for the idea, greetings.
